1
Spatial Data Preprocessing & Indices Calculation Module
Expected Outcome
Vectorized spatial remote sensing calculation module implementing NDVI, NDWI, NDBI, and Land Surface Temperature (LST) formulas in Python, verified by an automated unit test suite.
Acceptance Criteria
Vectorized NumPy implementation with zero-division protection.
Graceful handling of invalid spectral band values and NaN nodata pixels.
Automated test suite passing with 100% success rate in tests/test_spatial_indices.py.
Code adheres to PEP 8 standards with full type annotations.
Verification & Deliverables
Code Module: src/spatial_indices.py
Unit Tests: tests/test_spatial_indices.py

2
Stakeholder Survey & Problem Relevance Evidence
Expected Outcome
Empirical problem relevance evidence gathered via an online stakeholder survey of Astana residents and urban specialists, complete with statistical distribution charts and direct requirements traceability.
Acceptance Criteria
Quantitative survey formulated and launched with ≥ 30 verified respondents across Astana districts.
Key urban heat perception and GIS map demand metrics calculated (e.g. 83.3% affirmative demand).
7 visual analytical charts generated and archived in docs/survey_charts/.
Findings documented with full traceability to requirements in docs/02_evidence_relevance.md.
Verification & Deliverables
Documentation: docs/02_evidence_relevance.md
Survey Charts: docs/survey_charts/
Pull Request: GitHub PR #1 (DIP-08-relevance-survey)
Merge Commit: Commit d8c2d14
Assignee: Zhetpis Baigulov (242181)
